## Description Of Change

Qwest has informed the CLEC community of its plans to deploy Fiber To The Premise architecture in certain communities. Because this architecture is fiber based, Qwest will not be able to technically line power the customer phone from the serving wire center. Therefore, a battery back up unit is required at the end user customer location for lifeline capability. The maintenance of this battery backup unit will be the responsibility of the end user customer. It is proposed that Qwest will monitor this battery backup unit for alarms and provide notice to a CLEC providing resale service to an impacted end user location so that the CLEC end user customer may make arrangements to ensure that the battery is replaced.

Qwest is seeking an exception to the normal implementation timeline for this Level 4 Change Request, due to anticipated customer demand. Qwest is also requesting implementation via a Level 1 Notice, in lieu of a Level 4 Notice.
